## FOR IMMEDIATE RELEASE

### **New Vuze® Table Location System from HME Wireless Improves Efficiency and Flow Management for Fast Casual Restaurants**

*Now food is delivered faster and fresher*

**Atlanta, GA — January 19, 2015** — Fast casual restaurants often use table location systems to ensure food carriers deliver meals to the right tables in a timely manner. HME Wireless® made this process faster and simpler with the introduction of Vuze® – the table location system that helps restaurants reduce congestion and deliver food faster and fresher.

“Fast casual restaurant patrons often wait around the order counter, which causes congestion and disrupts service,” said Russ Ford, Vice President of HME Wireless. “With the Vuze Table Location System, guests can sit down and relax without worrying about missing their order. When their meal is ready, food carriers know exactly where to go – without having to hunt for table numbers or call out guest names.”

Using active radio frequency identification (RFID) for cleaner, faster transmission of data, Vuze gives restaurants the option of tracking customers by zone as well as by individual tables. This innovative feature makes it easier to train new employees, and enables food carriers to multitask when delivering food orders because they’re not locked in to finding a specific table number.

Other Vuze benefits include:

- Fast setup and simple operation
- Easy integration with most kitchen display systems
- One-touch notification to guests when orders are on the way
- Water resistant tags to prevent damage from drink spills
- Rechargeable, long-life batteries to eliminate downtime

“HME Wireless designs products that help restaurants improve operations, provide better customer service, and increase profitability,” adds Ford. “When food runners no longer have to hunt for tables, they can work faster and more efficiently while guests enjoy a calmer, more satisfying dining experience.”
