

FOR IMMEDIATE RELEASE

CLEAR-COM HIGHLIGHTS CC-300 AND CC-400 HEADSETS AT INFOCOMM 2012

New Headsets Offer Better Comfort, Improved Sound Quality and Greater Flexibility

LAS VEGAS, JUNE 15, 2012 — **Clear-Com**[®], a global leader in critical voice communication systems, will highlight at InfoComm 2012 (Booth C10345) the latest additions to its line of professional headsets, the **CC-300** and **CC-400**. The CC-300 and CC-400 offer extra comfort, better performance and more flexibility for users who are constantly employing intercoms for long hours. These headsets are compatible with Clear-Com's wide range of wired and wireless intercoms.

Personalized for Comfortable Fit

Wearing headsets day in and day out while communicating with other team members over the intercom can easily and quickly exhaust a user. The new Clear-Com CC-300 single-ear headset and CC-400 double-ear headset were designed to reduce fatigue and accommodate individual preferences by offering a clear and comfortable audio experience.

The CC-300 and CC-400 headsets' microphone booms can be rotated 300 degrees, allowing the microphone to be worn on the right or left side of the head. Users can also make the headsets larger or smaller by manipulating the slide adjustments on either side of the headband. In addition, the enclosed headphones have very soft padding and a slight rotation to provide a better fit.

Balanced for High Performance

The CC-300 and CC-400 headsets are equipped with hyper-cardioid dynamic microphones and high ambient-noise attenuation headphones that deliver balanced audio performance to the user. The acoustic isolation capability significantly reduces external background noise and with a clear audio profile, including an up to 20-kHz frequency response, the new headsets are made for professionals who demand high-quality sound.

Flexibility for Operational Convenience

The CC-300 and CC-400 headset microphones can be turned on and off by moving the microphone boom. Users need only to pull the boom gently downwards to turn on the microphone and push the boom gently upwards to turn it off, in effect giving them a quick and simple mute to their intercom system.

Interchangeable cabling is another major benefit of the CC-300 and CC-400 headsets. Both headsets come with a standard four-pin female connector, but users can easily change the cable and connector at the base of the headset by using a Phillips screwdriver in order to accommodate different connector types. The same process can be used to repair and replace a damaged cable on the fly.

"Busy crew members need a headset that they can slip on and immediately feel the difference in fit and performance," says Stephen Sandford, Product Manager, Clear-Com. "The Clear-Com
