

FOR IMMEDIATE RELEASE

CLEAR-COM PRESENTS UNMATCHED INTERCOM SOLUTIONS AT I/ITSEC 2011

ORLANDO, FLORIDA, 28 NOVEMBER 2011—**Clear-Com®** a global leader in critical voice communication systems, will bring its vast portfolio of partyline, digital matrix, wireless and IP-based intercoms to this year's I/ITSEC 2011 (Booth 3030). With over 40 years of experience in designing and manufacturing highly-innovative and robust communication technologies, Clear-Com has been a chief provider of intercom solutions for training and simulation, command and control as well as test and evaluation.

Clear-Com has consistently empowered training and simulation programs, helping them prepare air, ground and naval forces for a full spectrum of military, maritime and aviation operations. Steadfast and agile enough for the most demanding applications, Clear-Com systems deliver low latency, high quality audio to ensure that every command given is a command followed. Whether enabling correspondence between a few people or complex communications between hundreds of people, Clear-Com's clear, reliable and scalable intercom solutions allow military, aerospace and government personnel to successfully plan, coordinate and synchronize operations.

Clear-Com has helped optimize training and simulation programs at multiple Army Live-Fire Tank Ranges, NASA's Sonny Carter Neutral Buoyancy Lab, nationwide Future Combat System facilities, the Missile Defense Integration and Operation Center. The intercoms have also been used at several Navy facilities, including Corona and Coronado and have facilitated the operation of Predator trainers, C-17 maintenance simulators and many more. Because of Clear-Com's easy-to-integrate interfaces; broad selection of wireless beltpacks and extensive connectivity options via CAT 5, fiber, IP, STP and T-1/E1; it is still the leading choice of voice communication systems for enhancing the safety and efficiency of the military, aerospace and government's undertakings.

Clear-Com will present at I/ITSEC its wired solutions - comprising the Encore™ partyline intercom and Eclipse digital matrix systems - along with its wireless options, which include CellCom®, Tempest®2400 and HME DX Series. The company will also exhibit its VolICE 2.0 and Concert™ IP-based intercoms.. The Encore partyline is the most comprehensive wired system in its class, with intuitive user controls and superior audio quality for group communications. The ultra-flexible Eclipse digital matrix intercoms not only intelligently integrate with wireless and IP-based intercoms, but also offer high user capacity and many communication paths for direct and one-to-many connections. Clear-Com's complete repertoire of full-featured wireless intercom systems also enables far-reaching coverage and interference-free communications that is far better than other wireless technologies. Further, its intercom-over-IP solutions are a cost-effective, professional-grade communications solution functioning through an internet connection, increasing accessibility to remote sites.

CAE, a global company delivering industry-leading simulation solutions, will also be utilizing Clear-Com's Encore partyline intercoms to organize and manage their flight simulation demonstrations at I/ITSEC 2011 (Booth 1735).

About Clear-Com®

Clear-Com, an HME company, is a global provider in professional voice communications systems since 1968. We develop and market proven intercom technologies such as Analog & Digital Partyline, Digital
