

HME Releases WH200 ComLink All-in-One Digital Headset

Innovative Design and Digital Sound Available in a Complete Package

SAN DIEGO — April 3, 2006 — The newest development from HM Electronics, Inc. (HME), the digital all-in-one WH200 ComLink headset is revolutionizing communication, style and function for pro audio applications requiring clear, wireless communications.

Events are often chaotic, teeming with people of all roles and a veritable array of equipment. This in turn calls for streamlined, comfortable, wireless headsets like ComLink which satisfies all of these needs with less hassle and more refinement.

This digital, all-in-one headset weighs 5.7 ounces and allows users to work in a variety of locations — even in small or dark areas. The wireless design makes ComLink more user-friendly, circumventing the hazard of cables snagging on other equipment. ComLink's ergonomic shape provides a stable fit while the digital design provides crystal-clear communication.

"We've eliminated the cable so that users can move about more easily and comfortably while conversing with other crew members," said Rick Molina, product manager of HME's pro audio division. "We're so excited to introduce a headset that's super lightweight and delivers the digital clarity that's crucial to any type of application."

Operating in the license-free, 2.4 GHz frequency band, ComLink provides clear, digital sound quality with no interference from neighboring systems.

ComLink is compatible with HME's portable DX100 or rack-mounted DX200 base stations. You can easily add a ComLink headset to your current system for more mobile communications. The systems' diversity antennas and dual-slot diversity ensure that the strongest audio signal is transmitted and received, further improving the clarity of conversations.
