

**FOR IMMEDIATE RELEASE**

## **Clear-Com Brings New Capabilities in Digital Intercom Systems to AFCEA West**

**ALAMEDA, FEBRUARY 10, 2014** – At this year’s AFCEA West show in San Diego, [Clear-Com](#)<sup>®</sup>, a global leader in critical voice communication systems, will showcase its latest enhancements in digital intercom technology. The company will highlight the new HelixNet<sup>®</sup> Partyline intercom system and the new Eclipse HX matrix systems.

To meet the expectations of today’s military, aerospace, and government personnel, integration is critical. Clear-Com’s communications systems address the ongoing need for full compatibility and reliability with increased workflow efficiencies during critical operations, as well as future-proof capabilities to address any unseen challenges.

HelixNet Partyline is the ideal communication system for group operations in command and control environments. This powerful and robust system offers many capabilities in a compact system. Each unit offers four separate talk channels for supervisory positions to have instant and direct access to an individual or a group of operators on the HelixNet system. Each beltpack user may have talk or listen access to any two of the four talk channels. Multiple HelixNet systems can be linked together to create a larger communication group.

HelixNet Partyline is an all-digital system, offering a superb audio sound quality and flexibility. The plug-and-play system is also easy to deploy, operate, and maintain. On-screen menu makes setup effortless. The system provides several powering options over either Ethernet or Fiber. Power for operating the Main Station, including all connected beltpacks, can be supplied over a single cable.

The new Eclipse HX platform is the most sophisticated, flexible, and scalable range of digital intercom systems for extensive and expansive intercommunication needs. The Eclipse HX systems are ideal for applications where team members of a common operation are situated in geographically-dispersed locations, either in different parts of the building, within the vicinity, across town/country, or in other countries. The platform offers many different connectivity options to tie together multiple command points, either over Ethernet LAN/WAN, E1/T1, IP, and/or Fiber. The Eclipse HX platform can support local or remote operators on wired, wireless and IP-based user devices.

“Developing communications systems that meet the needs of a diverse market is a high priority for Clear-Com,” said Craig Fredrickson, Product Marketing Manager at Clear-Com. “We bring together communication technology that work together seamlessly and securely, with consistent service, quality, and interconnectivity.”

The annual Armed Forces Communications and Electronics Association (AFCEA) show will be held on February 11-13, 2014 at the San Diego Convention Center. Clear-Com is a corporate member of the AFCEA. Visit us at booth #1223.
