

HME Releases its New DX300 Wireless Headset System for High School Football Coaches and Pro Audio Applications

Up to 20 Users Participate in Hands-Free, Two-Way Conversation

SAN DIEGO — August 20, 2007 — HME is pleased to announce the DX300, a wireless headset solution designed for high school football coaches and audio professionals requiring 2-channel operation. Featuring the smallest and most lightweight beltpac, the DX300 allows hands-free, simultaneous communication for up to 20 users.

“We designed DX300 for sports (primarily high school football coaches) and professional audio intercom users who require a rugged and portable digital solution” said Rick Molina, product manager of HME’s Pro Audio Division. “This affordable, highly reliable system sets up in minutes and can be expanded from the basic five user system to accommodate up to 20 users in clear, two-way, hands-free conversation. A 4-Wire I/O Base Interface allows pro audio users to connect to external hardwired intercom systems.”

The DX300 wireless headset system is designed to travel easily from venue to venue without concern for outside interference. It can operate on either electrical AC power or batteries. Dual-slot diversity antennas detect the strongest signal for clear, uninterrupted conversations.

Users can mix and match two types of COMMUNICATORS® – the ergonomic beltpac or the all-in-one wireless headset. The BP300 is the industry’s smallest, most comfortable and lightweight beltpac weighing only 7.4 oz with battery and pouch.

The DX300 comes with a four-port battery charger and rechargeable lithium-ion batteries that can be charged in less than three hours even while all COMMUNICATORS® are in use during an event. Operating in the license-free, 2.4 GHz frequency band, DX300 ensures secure, encrypted communications without the need for frequency coordination.

For more information on DX300, please call (800) 909-6604 or logon to www.hme.com/DX300.

About HME
