
HME Pro Audio Accessories Added to the PRO850 and DX200 Product Lines

New Remote Antenna Kit Extends the Range and Reception of PRO850; Rack Mount Kits Ease Installation for the DX200 & PRO850 Wireless Intercoms

SAN DIEGO — March 27, 2007 — HME is pleased to introduce accessories for their family of wireless intercom systems – the RAK850 Remote Antenna Kit and the RMK850 and RMK200 Rack Mount Kits. The RAK850 system is a practical, low-cost solution for PRO850 installations experiencing RF reflections and dropouts. With the RAK850, the antennas for the PRO850 Wireless Intercom System are easily relocated up to 30 feet away from the base station to help overcome environmental conditions that interfere with reception. Relocating the PRO850 system antennas with the RAK850 can help alter the transmission and reception patterns and thus improve system performance.

The new Rack Mount Kits for the HME PRO850 Wireless Intercom System and the DX200 Digital Wireless System fit into a rack-mounted configuration enabling the antennas (which normally would be mounted to the back of the intercom's base station) to be fitted on the front of the rack panel. Front-mounting the antennas clears the reception path by overcoming the metal rack unit walls that interfere with radio waves. The RMK850 and RMK200 are 1-RU panels that perfectly match the size of the base station, minimizing the required rack space and combining the components in the rack for a professional appearance and more orderly management of cabling.

About HME

Founded in 1971, HME is an innovative technology company focused on enhancing productivity and customer service for the pro audio and quick service restaurant markets. HME's groundbreaking innovations, passion for excellence, and commitment to service have earned the distinction of technology leader. As the pioneer of the first intercom system for the pro audio industry and the wireless headset for the drive-thru market - HME delivers the most comprehensive and customer-focused solutions to businesses worldwide. HME's Digital DX Series Wireless Intercoms offer exceptionally clear, hands-free communication within the 2.4 GHz range. The HME system is immune to interference from systems operating in the UHF or VHF bands, and requires no license to operate. The award-winning PRO850 allows production crewmembers to easily communicate with their manager and each other via wireless belt pacs.
