

## **HME Releases Lightweight Headsets with Electret Noise-Canceling Microphone**

*Flexible boom design can be worn on either ear to meet users' personal preference.*

**San Diego, CA – March 28, 2008** – HME is pleased to announce the HS15 and HS15D lightweight over-the-ear headsets. These convenient headsets suppress ambient noise while offering maximum comfort for its users.

"We're confident the HS15 and HS15D will change the way the industry looks at over-the-ear headsets," said Rick Molina, product manager of HME's Pro Audio Division. "It starts with the design, and continues with a list of features that put the users' preferences front and center. If you want great sound and also require comfort and flexibility, these headsets are the perfect solution."

The HS15 single muff headset is equipped with a flexible boom that can be positioned on either side of the HS15, so users can tailor the headset to the side they prefer. The HS15D is identical to the HS15 except that it supports dual muff headset requirements.

A noise-canceling microphone reduces ambient noise so users can focus on the task at hand. And with its sleek, lightweight design, the HS15 and HS15D can be worn with greater comfort for longer periods of time.

For more information on the HS15 and HS15D, please call (800) 909-6604.
