CLEAR-COM SHOWCASES NEW COMMUNICATION SOLUTIONS FOR TEST & EVALUATIONS PROJECTS AT ITC/USA 2015

ALAMEDA, USA – OCTOBER 26, 2015 — [Clear-Com](#)[®], the leader in real-time communication and connectivity solutions, introduces the new Clear-Com Gateway radio interoperability solution, the FreeSpeak II™ wireless intercom, the Agent-IC™ mobile app, and LQ-R four/eight-port IP interface devices at the International Telemetry Conference (ITC/USA). Clear-Com solutions facilitate coordinated communications across many people with the same or different responsibilities in order to achieve a common project goal.

“Clear-Com intercom systems have been consistently used for team communications during testing & evaluations at many missile test ranges, proving grounds, missile defense agencies, wind tunnels, etc.,” said Terry Skelton, Senior Account Executive at Clear-Com. “Our range of high quality full-duplex intercom and reliable connectivity systems enable users to stay in constant communication, allowing voice exchanges to occur in real time effectively and efficiently across disparate communications systems and geographies.”

At ITC 2015, Clear-Com is showcasing the new interoperability solution, Clear-Com Gateway, ideal for immediate on-site communication across different radio frequencies. It combines advanced radio interface technology for analog and digital radios with a suite of programmable features. Gateway does this by bridging radio channels across different radio platforms – be it port-to-port, port-to-multi-port or Radio-over-IP (RoIP) – which enables cross-communication between different frequencies.

Clear-Com is also introducing its new 2.4GHz band FreeSpeak II digital wireless intercom solution at this show, complementing the 1.9GHz version that was released over a year ago. Both versions can be used as a standalone wireless intercom supporting 20 wireless beltpacks or integrated with Clear-Com’s Eclipse HX matrix system as a wireless intercom solution that can support up to 50 wireless beltpacks at a time. With the distributed active transceiver network, FreeSpeak II can be deployed across a wide campus area in outdoors and indoors environments. The beltpacks and transceivers have been proven to work under

harsh conditions as they are IP65-rated for water proofing and dust resistance and have high temperature tolerance.

Mindful of how many iPhones and iPads are online today, Clear-Com has developed the Agent-IC mobile app that allows iOS users to remotely connect to the Eclipse-HX (EHX) Matrix intercom systems over 3G, 4G or Wi-Fi/IP networks. Agent-IC provides capabilities similar to an intercom control panel for connecting commanders and teams in remote locations, or crew spread across diverse environments.

Clear-Com's LQ-R four or eight-port IP interface devices, which come in a 1RU form factor, are the latest additions to the LQ Series family. These devices can simply and cost-effectively extend or link any industry-standard 2-wire or 4-wire intercom and audio systems over LAN, WAN or IP networks. The new LQ-R devices can provide either four or eight ports per rack unit, while the compact LQ throw-down devices offer two ports of connectivity. All have the option of either eight 4-wire connections, four 2-wire connections, or four 2-wire and four 4-wire connections in a single unit. The 2-wire option is both Clear-Com and RTS TW compatible.

Clear-Com's line of new and enhanced products is available for demonstration at ITC/USA 2015 on Booth 507 at Bally's Las Vegas.

About Clear-Com®

For over 40 years, Clear-Com has provided professional communications solutions for command & control, training & simulation, and net-centric communications. Clear-Com's partyline, digital matrix, wireless systems, fiber transport and intercom-over-IP conferencing solutions have led the industry with high quality audio performance that meets critical needs in a variety of federal and municipal government operations. Clear-Com continues to be the preferred choice for clear, reliable, and scalable communication solutions for local government operations such as City of Chicago EMS, Illinois State Police and the Houston Metro to federal government operations such as U.S. Disaster Relief Corp, U.S. Customs & Border Protection, NASA, and many more.
