**HME's New PRO850 Wireless Intercom System
Offers More Flexibility and Operating Power to Pro-Audio Professionals**

San Diego, CA — HME's new PRO850 UHF Wireless Intercom System is taking communication to the next level for sound and production professionals in the pro-audio market. The PRO850's potential application spans a wide range of business segments, including television broadcast, military, aerospace, theatres, stadium/concert events, churches, touring companies, schools, and other industrial companies. The PRO850 allows production crew members to easily communicate with their manager and each other via wireless, lightweight belt-pacs — without the hassle of dragging cables around their working space.

"The PRO850 was designed specifically for and by pro-audio professionals," says Mike Hughes, General Manager of the Professional Audio Division at HME. "We know that these technically savvy professionals preferred more flexibility and operating power in a wireless intercom system. We've consulted extensively with field broadcast and sound engineers at virtually every stage of R&D to create PRO850, the ultimate wireless intercom system that meets their specific technical needs."

In addition to the standard capabilities offered by existing wireless intercom systems, the PRO850 comes with a multitude of cutting-edge features designed to give pro-audio professionals more technical and creative freedom. Innovative features like frequency agility, PC and PDA interface, simultaneous dual-channel interface, user-friendly graphical interface with pull-down menus on the base, individual belt-pac volume control, belt-pac channel lockout, versatile headset connector, wireless ISO, and low battery alert are just some examples that make HME's PRO850 unique. Additional capabilities that distinguish the PRO850 from comparable systems include a wider operating range, clearer sound quality, more interference immunity and greater reliability.

"We're extremely excited about offering pro-audio professionals a system with more capabilities than anything out there," continues Hughes. "The PRO850 is a significant technological innovation that has captured our customers' interest long before its release. In fact, both Fox News and CNBC Studios have just purchased the PRO850." The PRO850 can be purchased through HME's exclusive US Distributor, ASG (Audio Specialties Group: 800-542-3332, www.a-s-group.com) or through any of HME's international pro-audio distributors.

About HME

HME is a leading provider of customer-focused solutions to enhance the performance and productivity of businesses in a variety of markets. Incorporated in 1971, HME was a pioneer in the development of the first intercom system for the pro-audio industry. From communications to entertainment, security to pedestrian tracking, HME's wireless and digital innovations are transforming many industries, including quick service restaurants, pro-audio, casinos and retail. As a privately held company, HME develops and delivers a comprehensive line of customer-driven solutions to over 70 countries worldwide.
