
New Software Simplifies Pro Audio Applications

HME Upgrades PRO850 Software to Version 3.0

POWAY, Calif. — Sept. 7, 2005 — The new PRO850 Software from HM Electronics, Inc. (HME) shows that a sophisticated professional audio wireless system can have both complex capabilities and simple operations.

In the pro audio world, applications can be very elaborate and complex — involving numerous people and steps — therefore requiring a system like the PRO850 to support such level of technical sophistication. HME's new software is designed to help users get the most out of their system with much less effort and time.

This new Version 3.0 Software features a setup “wizard” which efficiently guides a user through the PRO850 system configuration process and expedites the setup process.

“Our goal is to create a software that will make it as easy as possible for our customers to do their jobs,” said J. Michael Hughes, vice president and general manager of HME's professional audio division. “Users can easily learn how to configure the PRO850 Wireless System for their specific application.”

HME's new software also enables the user to configure the PRO850 System online or offline — making it more convenient for users to work at a remote location if needed. Additionally, the setup wizard features help buttons on each screen that link to the appropriate sections of the new html system to provide the user further technical assistance.

Many of the advanced features for this software came directly from users — through a special “Power User” forum hosted by HME and its exclusive affiliate — Audio Specialties Group (ASG). The forum's facilitator Robert Nudo, managing director from ASG solicited input from many distinguished sound professionals in the making of the Version 3.0 Software.
