

**FOR IMMEDIATE RELEASE**

**CLEAR-COM EXHIBITS SEAMLESS ROAMING  
FOR TEMPEST2400 AT INFOCOMM 2012**

*Product Breakthrough Delivers Uninterrupted Coverage for Large-Scale Live Productions*

**LAS VEGAS, JUNE 14, 2012** — **Clear-Com®**, a global leader in critical voice communication systems, is pleased to feature the **Seamless Roaming** capability of its **Tempest®2400** digital wireless intercom at InfoComm 2012 (Booth C10345). Further enhancing one of the most feature-rich and robust systems within Clear-Com's wireless product line, Tempest Seamless Roaming is ideal for large venues separated by sizeable distances such as campus buildings, multi-theater environments and/or outdoor venues.

"With Seamless Roaming, a Tempest2400 wireless BeltStation can cover an extensive area with multiple zones that would not be adequately supported by a single BaseStation installation," says Craig Fredrickson, Clear-Com's wireless product manager. "This allows audio professionals to focus on critical production cues rather than having to change the settings on their wireless BeltStations when moving within a venue."

Tempest Seamless Roaming is designed for crew members who must move freely and wirelessly from one given coverage area to another without interference or dropout of intercom communication. Base stations are linked together with the newest ZSync (Zero Synchronization) Technology. The ZSync Technology provides a zero-sync reference that coordinates the hopping patterns of all connected BaseStations every time the system is powered up, irrespective of random time variation in power-up sequences, providing improved system performance and a seamless wireless experience.

With the Seamless Roaming feature, BeltStation users can migrate between as many as 16 different Tempest2400 BaseStations (coverage areas or zones). Both Seamless Roaming and iSelect Roaming are available to accommodate virtually every application need.

The Tempest2400, designed with Frequency Hopping Spread Spectrum (FHSS) technology, utilizes a narrow band signal that is continually changing frequencies to burn through RF noise and interference. Due to the FHSS technology, the Tempest system does not compete with signals from other 2.4 GHz wireless devices, minimizing frequency coordination and enabling flawless performance. Moreover, the wireless system features state-of-the-art 2xTX Transmission Voice Data Redundancy, which sends each packet of audio data twice on different frequencies and through different antennas, ensuring uninterrupted audio communications. Via four- and two-wire connections, it can interoperate with other Clear-Com intercom systems, as well as those from other manufacturers.

Tempest2400 offers three different modes of operations—normal, shared and split. All modes are supported under the Seamless Roaming function. A single Tempest2400 in normal mode can support between one and five full-duplex wireless users who always need to speak on the intercom system. However, in split or shared mode, an unlimited number of users can monitor the conversation and share talk capability. A combination of Tempest systems operating in either normal or shared mode can co-exist in the same environment for the ultimate in flexibility.

**About Clear-Com®**

Clear-Com, an HME company, is a global provider in professional voice communications systems since 1968. We develop and market proven intercom technologies such as Analog & Digital Partyline, Digital Matrix, Wireless and Intercom-over-IP systems for critical communication applications in broadcast, performance venues, military, government and enterprise markets. Recognized for our legacy of intercom innovations, production teams around the world have come to depend on Clear-Com for clear, reliable and scalable communications solutions. For more information, please visit [www.clearcom.com](http://www.clearcom.com).

**About HM Electronics, Inc. (HME)**

HM Electronics, Inc. is a diverse group of companies providing solutions that enhance productivity and customer service in markets including restaurants, sports and professional audio. Founded in 1971, we sell, service and support products in 89 countries worldwide, via company-owned offices in the U.S., Canada, Europe, and China, and an extensive network of HME-authorized distributors, dealers and service agents. Every day quick service restaurants take over 24 million orders using HME systems. With the recent acquisition of Clear-Com, HME is the world's leading provider of professional intercom systems.
