

FOR IMMEDIATE RELEASE

**CLEAR-COM® UNVEILS FURTHER ENHANCEMENTS  
TO ITS TEMPEST DIGITAL WIRELESS INTERCOMS AT IBC 2013**  
*Recent Updates Include Tempest2400 Roaming and Remote Line Extender*

**AMSTERDAM, AUGUST 26, 2013** — **Clear-Com®** announces further enhancements to its **Tempest Digital Wireless Intercoms** at IBC 2013 (Stand 10.D29). Included among the latest offerings is a new **CCT-RT-EX Remote Line Extender** for the Tempest CCT-RT transceiver as well as **Tempest2400 Seamless Roaming** features.

Being shown for the first time at IBC, the new **Tempest CCT-RT-EX Remote Transceiver Line Extender** is used to increase the maximum distance between a Tempest BaseStation and the Remote Antenna Transceiver. The **CCT-RT-EX** expands the distance of a BaseStation signal to a remote antenna by as much as 914 metres (3,000 feet) with one Line Extender or 609 metres (2,000 feet) per Line Extender if using more than one Line Extender. A total of three Line Extenders can be connected to provide total coverage of up to 2286 metres (7,500 feet). These solutions further enhance the system's application for users requiring ultra-portable wireless communications in RF-rich environments.

Additionally, Clear-Com will also show the **Tempest2400 Seamless Roaming** features, which allow Tempest2400 BeltStation users to move freely between as many as 16 different BaseStations (coverage areas or zones). This provides users with continuous wireless coverage without the need to reconnect to the BaseStation in each zone, allowing broadcast professionals to focus on critical production cues rather than on the settings of their wireless BeltStations. This is useful throughout large venues separated by large distances, such as multi-studio broadcast complexes and sports arenas, or to help overcome RF signal barriers. With Tempest's Seamless Roaming, BeltStations function as they normally do while roaming and there is no interruption of the signal because the BeltStations automatically switch from one BaseStation connection to another. Both Seamless Roaming and manual iSelect Roaming are available to accommodate virtually every application need.

**About Clear-Com®**

Clear-Com, an HME company, is a global provider in professional voice communications systems since 1968. We develop and market proven intercom technologies such as Analog & Digital Partyline, Digital Matrix, Wireless and Intercom-over-IP systems for critical communication applications in broadcast, performance venues, military, government and enterprise markets. Recognized for our legacy of intercom innovations, production teams around the world have come to depend on Clear-Com for clear, reliable and scalable communications solutions.
