ISE 2015, BOOTH 7-S225

CLEAR-COM DELIVERS INTEROPERABILITY SOLUTION WITH CLEAR-COM GATEWAY DEVICES

- Interoperable platform enables cost-effective connectivity to IP networks, intercoms, telephone networks and 2-way radios -

ALAMEDA, USA – 10 FEBRUARY 2014 — [Clear-Com](#)[®] will preview the Clear-Com Gateway family on **Booth 7-S225** at ISE 2015. The modular CG-X1 and CG-X4 devices are built on the flexible and cost-effective platform for linking and bridging disparate communication systems such as IP networks, telephone networks, radios and intercom systems, for highly-coordinated, critical operations. Clear-Com Gateway is the ideal interoperability solution for immediate on-site communication across different frequencies for live events, multi-site venues, security services and many other applications. ISE 2015 takes place at the RAI Exhibition Centre in Amsterdam on February 10-12, 2015.

The CG-X1 is the 2-port option for remote sites and single-channel bridging. The CG-X4 carries a higher port density of 8 ports in a small form factor, with the possibility of up to 16 ports in total in a 1RU (rack-unit) space.

The Gateway devices offer advanced radio interfacing for analog and digital radios with a suite of programmable features to meet the most demanding radio and Land Mobile Radio (LMR) applications. For live events, a crucial feature of Gateway is the ability to have radio and SIP interfacing in a single device. When connected to Clear-Com intercom systems, the 4-wire port signaling capability can activate features and trigger radios.

Clear-Com Gateway devices bridge radio channels across different radio platforms, port-to-port, port-to-multi-port and Radio-over-IP (RoIP), enabling cross-communication between different frequencies. In addition, as the radio market continues to move to Digital Radios and 4G LTE, the Gateway devices can link to

(more)

these digital radio networks via SIP and the Digital Radio Module which allow analog-to-digital and digital-to-digital bridging and conferencing on one platform.

Standards-based IP interfacing for Voice-over-IP (VoIP), RoIP, Unicast, Multicast and SIP applications are supported for connectivity and interoperability. When connected to Clear-Com intercom systems, SIP telephone access becomes available within Eclipse HX and HelixNet.

Each Gateway device is configured using modules. The 4-wire module connects intercom, radio and audio sources. The VoIP module connects SIP and RoIP with Unicast and Multicast modes. The digital radio module is a 3-channel module that incorporates Digital Voice Systems' AMBETM 3003 VoCoder technology for gateway applications with digital mode radio systems. The CG-X1 supports one module with 2 ports, while the CG-X4 supports four modules with 8 ports.

"We're excited to preview the Clear-Com Gateway platform devices at ISE 2015. For any organisation that needs immediate, reliable and economical communication, from live events to multi-campus venues, Clear-Com Gateway solves issues of cross-communication to allow vital information to be shared," said Craig Fredrickson, Product Manager, Clear-Com.

The complete Clear-Com line of new and enhanced products will be available for demonstration at ISE 2015 on Booth 7-S225, including the highly popular FreeSpeak II digital wireless intercom system, the LQ Series comms link family which is now shipping, and the Eclipse HX v8.0 software for Eclipse HX digital matrix intercom systems.

About Clear-Com®

Clear-Com, an HME company, is a trusted global provider of professional real-time communications solutions and services since 1968. We innovate market proven technologies that link people together through wired and wireless systems.

Clear-Com was first to market portable wired and wireless intercom systems for live performances. Since then, our history of technological advancements and innovations has delivered significant improvements to the way people collaborate in professional settings where real-time communication matters. For the markets we serve -- broadcast, live performance, live events, sports, military, aerospace and government-- our communication products have consistently met the demands for high quality audio, reliability, scalability and low latency, while addressing communication requirements of varying size and complexity. Our reputation in the industry is not only based on our product achievements, but also on our

consistent level of customer engagement and dedication to delivering the right solutions for specialized applications, with the expertise to make it work. Around the globe and across markets, Clear-Com's innovations and solutions have received numerous awards and recognitions for ingenuity and impact to customers.
