## **CLEAR-COM SHOWCASES NEW INTERCOM SOLUTIONS AT ISE 2016**

**ALAMEDA, CA – 22<sup>nd</sup> JANUARY, 2016** — Clear-Com® will present its latest communication and connectivity tools at ISE 2016. These products demonstrate Clear-Com's intercom and connectivity solutions to enable secure, reliable and constant communications among local or geographically-disperse work teams.

Recently-released **HelixNet Version 3.0**, a software-only update to the acclaimed HelixNet digital network partyline platform, unlocks the overall capacity of the HelixNet system allowing it a six-fold expansion for supporting more communication channels and more users during live productions. HelixNet multiplied its basic channel count by three, with a new offering of 12 channels per HMS-4X main station. Furthermore, an additional 12 channels can be added simply by purchasing a licence, effectively enabling a single HMS-4X to provide a total of 24 channels.

The all-new, 2.4GHz **DX410** wireless intercom system delivers two communication channels that feature 7kHz wideband audio for exceptional audio clarity. Easy to set up and configure, DX410 introduces a lighter weight yet durable beltpack and all-in-one wireless headsets. With an upgraded radio and lost packet concealment capability, the DX410 is the best value for quality performance, range and sound.

**Agent-IC** is a new mobile app that provides users of Eclipse-HX Matrix intercom systems remote access from an iPhone or iPad over 3G, 4G or Wi-Fi / IP networks. The app offers a simple but highly effective intercom panel to connect studio staff and OB teams in remote locations or crew spread across wide areas for live events using portable handheld devices. The app is a virtual intercom panel that fits in the pocket and connects users from virtually anywhere in the world. The Agent-IC app is both cost effective and easy to deploy, providing global access to a host Eclipse-HX matrix intercom system.

The **LQ Series** is a family of connectivity devices for linking intercom and audio systems over LAN, WAN or IP networks. The LQ Series can be used for intercom conversation, networked music performances and for audio signals between different facilities. The new LQ-R devices can provide either four or eight ports per rack unit, while the compact LQ throw-down devices offer two ports of connectivity. The LQ-R devices have the option of either eight 4-wire connections, four 2-wire connections, or four 2-wire and four 4-wire connections in a single unit. The 2-wire option is both Clear-Com and RTS TW compatible. A maximum of six LQ IP interfaces can be linked together in any 2- or 4-wire combination.

“We’re pleased to bring our latest Clear-Com wireless and connectivity products to ISE 2016 this year, as well as our extensive range of products,” said Simon Browne, Director of Product Management, at Clear-Com. “Our cost-effective and robust solutions, whether wired or wireless, are built for many installations that are in need of reliable, flexible, and efficient communications.”
