CLEAR-COM BRINGS ALL-NEW DX410 WIRELESS INTERCOM SYSTEM TO BROADCAST ASIA 2016

- Two-channel 2.4GHz system provides clear, crisp communications for mid-size productions -

ALAMEDA, USA – MAY 12, 2016 — [Clear-Com](#)® will present the all-new DX410 two-channel 2.4 GHz digital wireless intercom system at Broadcast Asia 2016. Featuring 7 kHz wideband audio for exceptional audio clarity, it is the first DX Series wireless intercom system to offer this level of audio frequency range. Highly durable and light-weight, the DX410 beltpack and All-in-One wireless headset are designed to withstand long periods of usage and tough production environments.

“We are excited to bring the DX410 to Broadcast Asia,” said Craig Fredrickson, Product Manager at Clear-Com. “Ideal for live events and productions, the DX410 is truly an exceptional digital wireless system in terms of range, reliability, sound quality and comfort for the size of the system.”

Each BS410 base station can support up to 15 registered BP410 wireless beltpacks and/or WH410 All-in-One wireless headsets. In a single-channel operation, any four beltpack users can engage in simultaneous, full-duplex (talk-listen) communication, while three users may be in full-duplex mode in a dual-channel operation. DX410 also features 2-wire and 4-wire bridging and 2-wire auto-nulling. The bridging capability allows the option for combining the 2-wire and 4-wire ports together on either channel A or B, allowing operators to use a 4-wire out to send all the audio to a mixer, matrix intercom or other audio source. 2-wire auto-nulling enables fast and accurate integration with Clear-Com or TW wired partyline systems.

The high quality 7 kHz wideband audio expands audio range and increases intelligibility in high RF environments so that even soft whispers can be heard clearly.

(more)

With an upgraded radio and a lost packet concealment capability, the DX410 delivers an improved experience in performance, range and sound.

The BP410 and WH410 have rugged, reinforced casings and long-lasting keypads with no mechanical switch, proven to withstand harsh production environments. The same fast-charging Li-Ion battery for the BP410 and WH410 only takes 2.5 hours to provide up to 12 hours of battery life.

The DX410 uses a frequency hopping system (FHSS), and offers spectrum-friendly and Adaptive Frequency Hopping (AFH) modes, to avoid interference with Wi-Fi, while operating in the 2.4GHz band means that DX410 does not require radio licensing for use.

The DX410 and many other Clear-Com communications and connectivity solutions will be available for demonstration on **Booth 5D3-02 at Broadcast Asia 2016.**

About Clear-Com®

Clear-Com, an HME company, is a trusted global provider of professional real-time communications solutions and services since 1968. We innovate market proven technologies that link people together through wired and wireless systems.

Clear-Com was first to market portable wired and wireless intercom systems for live performances. Since then, our history of technological advancements and innovations has delivered significant improvements to the way people collaborate in professional settings where real-time communication matters. For the markets we serve -- broadcast, live performance, live events, sports, military, aerospace and government-- our communication products have consistently met the demands for high quality audio, reliability, scalability and low latency, while addressing communication requirements of varying size and complexity. Our reputation in the industry is not only based on our product achievements, but also on our consistent level of customer engagement and dedication to delivering the right solutions for specialized applications, with the expertise to make it work. Around the globe and across markets, Clear-Com's innovations and solutions have received numerous awards and recognitions for ingenuity and impact to customers.
