CLEAR-COM HIGHLIGHTS NEW INTEROPERABILITY SOLUTION WITH GATEWAY DEVICES

*- Interoperable platform enables cost-effective bridging of 2-way radios and SIP
interfacing --*

ALAMEDA, USA – MAY 06, 2015 — [Clear-Com](#)[®], the leader in real-time communication and connectivity solutions, will showcase its new Gateway interoperability platform at the Texas Emergency Management Conference (TEMC), the largest public safety show in the state of Texas, held on May 12-15, 2015 at the Henry B. Gonzales Convention Center (San Antonio). Clear-Com Gateway is the ideal interoperability solution for enabling on-site communication within a discipline, across a discipline and across jurisdictions in order to facilitate coordination of actions at an event at every level.

“We’re excited to introduce the new Clear-Com Gateway platform devices,” said John Kruman, Regional Sales Manager for the Central United States at Clear-Com. “We understand that interoperability devices are not new to the public safety market. But, what how it’s different is it has been proven to work seamlessly with Clear-Com’s wired and wireless intercom systems, enabling other important personnel such as dispatchers or incident commanders to be included in the communication—ensuring critical information can be shared.”

The modular CG-X1 and CG-X4 devices are built on a flexible and cost-effective platform for linking and bridging disparate communication systems such as IP networks, telephone networks, radio spectrums and intercom systems.

CLEAR-COM HIGHLIGHTS NEW INTEROPERABILITY SOLUTION WITH GATEWAY DEVICES

Clear-Com Gateway combines advanced radio interface technology for analog and digital radios with a suite of programmable features to meet the most demanding radio and Land Mobile Radio (LMR) applications. Gateway bridges radio channels across different radio platforms, port-to-port, port-to-multi-port and Radio-over-IP (RoIP) – enabling cross-communication between different frequencies. In addition, as the radio market continues to move to Digital Radios and 4G LTE, Gateway devices can link to these digital radio networks via SIP and the Digital Radio Module which allow analog-to-digital and digital-to-digital bridging and conferencing on one platform.

Clear-Com Gateway devices also have built-in SIP interface capability. Standards-based IP interfacing for Voice-over-IP (VoIP), Radio-over-IP (RoIP), Unicast, Multicast and SIP applications are supported for connectivity and interoperability. When connected to Clear-Com intercom systems, the 4-wire port signalling capability can activate features and trigger radios and SIP telephone access becomes available within Clear-Com systems.

The CG-X1 is the 2-port option for remote sites and single-channel bridging. The CG-X4 carries a higher port density of 8 ports in a small form factor, with the possibility of up to 16 ports in total in a 1RU (rack-unit) space.

Clear-Com's line of new and enhanced products will be available for demonstration at TEMC 2015 on Booth 409, including the popular FreeSpeak II digital wireless intercom system, the HME DX300ES, the ProGrid fiber-based infrastructure system and the successful HelixNet partyline intercom system.

About Clear-Com®

For over 40 years, Clear-Com has provided professional communications solutions for command & control, training & simulation, and net-centric communications. Clear-Com's partyline, digital matrix, wireless systems, fiber transport and intercom-over-IP conferencing solutions have led the industry with high quality audio performance that meets critical needs in a variety of federal and municipal government operations. Clear-Com continues to be the preferred choice for clear, reliable, and scalable communication solutions for local government operations such as City of Chicago EMS, Illinois State Police and the Houston Metro to federal
