

FOR IMMEDIATE RELEASE

HME Wireless announces new antibacterial patient and family paging systems with continuous alerts feature

Developed in response to patient's desire to reduce spread of germs

Atlanta, GA—August 17, 2011—HME Wireless has announced the addition of antibacterial patient and family [hospital paging system](#) to its complete line of on-site paging solutions. Their new Antibacterial IQ Pager offers all the capabilities of [medical paging](#) with additional benefits. Based on an independent study, the plastic used in the pagers contains antibacterial agents that have been shown to significantly reduce the common bacterial strains *staphylococcus* and *Escherichia coli*. The antibacterial agent is added during the manufacturing process, so it won't absorb contaminants, is easy to keep clean, and doesn't allow bacteria to breed on the [hospital pager](#).

"This new technology answers our customer concerns about reducing germs in the medical environment," said Russ Ford, Vice President of HME Wireless. "At the same time, it provides a reliable on-site medical paging solution."

Patients and family members are provided a better healthcare experience with the Antibacterial IQ. The lightweight [medical paging](#) provide the freedom to have a meal in the cafeteria, visit the gift shop, get fresh air, or relax in the waiting area—without worry. The flexibility can help increase revenue potential for your medical center as well.

These ergonomic, rechargeable patient and family [hospital paging system](#) also operates with continuous alerts, so that waiting guests won't miss or forget about a page. The feature also helps to reduce pager loss, a common and costly risk associated with pagers that don't have continuous alert systems.

For more information on the Antibacterial IQ and complete on-site paging solutions from HME Wireless, call (866) 611-4202 or visit www.hmewireless.com.
