

FOR IMMEDIATE RELEASE

**HME Wireless launches new iPad restaurant paging app suite;
State-of-the-art technology redefines restaurant paging systems**

ATLANTA, GA — May 9, 2013 — In the highly competitive food service industry, restaurants are increasingly turning to high-tech tools to improve service and attract more customers. Once again, HME Wireless leads the way with its new Restaurant Paging App Suite. Designed for use with iOS and Android devices, these innovative tools give busy restaurants a complete guest, server, and table status system in one easy-to-use paging app suite.

“Mobile devices are being deployed across almost every industry today with no exception in hospitality,” says Russ Ford, VP of HME Wireless. “We are seeing tablets used to order food at the table, guests taking surveys and playing games on smart phones, digital menu boards and even entire POS systems running on mobile and cloud based systems. Our new app suite gives restaurants a simple yet sophisticated tool for building sales and increasing guest satisfaction.”

The Restaurant Paging App Suite includes four separate solutions designed to help restaurant staff deliver a more enjoyable dining experience for guests while helping operators execute at an exceptionally high level at the same time:

- **GuestCall** enables staff to track wait times, page waiting guests or other needed staff members, as well as get detailed reporting on many aspects of restaurant operations.
- **ServerCall** keeps servers, kitchen staff and managers in constant communication for improved server efficiency.
- **Push Button** lets users page staff or managers with important updates to keep the restaurant running smoothly.
- **TableScout** allows staff to update table statuses instantly for faster and more efficient seating of guests.

“The app suite only needs one transmitter, the iStation, and works with all HME Wireless pagers for seamless integration with a restaurant’s current system,” adds Ford. “And you can download the whole suite or just the individual applications you need. At HME, we strive to help restaurants operate more efficiently and profitably, and our new app suite takes a giant step in that direction.”
