

FOR IMMEDIATE RELEASE**HME introduces temperature alert system to help restaurant operators protect quality and safety of frozen and refrigerated foods**

Sensor technology sends alert via ION IQ drive-thru headset system when cooler or freezer malfunctions, or door is left open

SAN DIEGO, CA — December 20, 2012 — HM Electronics, Inc. (HME) has introduced a new temperature alert system that works in conjunction with its ION IQ headset system. A single, compact sensor sends an alert to the base station, and then to the employees' drive-thru headset, as soon as the refrigerator or freezer temperature exceeds the limit set by the manager.

"We're continually striving to stay ahead of issues that affect our customers' efficiency and profitability," said Daren Haas, VP of Marketing and New Business Development at HME. "This simple accessory alerts you of a pending issue to help prevent an employee mistake from causing disastrous consequences."

No software program or special training is required to set-up or to use the system. Designed as an affordable accessory to HME's industry leading ION IQ drive-thru headset systems.

"Food safety is serious business," added Haas. "With this system, our restaurant operators can rest assured that their frozen and refrigerated foods are not only fresh, but well protected at all times."
