

FOR IMMEDIATE RELEASE**Loma Linda University Medical Center-Murrieta adopts HME Wireless Paging System for Patients and Guests**

ATLANTA, GA – August 18, 2014 – Loma Linda University Medical Center – Murrieta (LLUMC-M), a nonprofit community hospital located in Murrieta, California, has partnered with HME Wireless to implement a [hospital paging system](#) to ease communications between practitioners and patients.

The hospital, which is owned and operated by the Loma Linda University Health and the Seventh-day Adventist Church, services the Murrieta and Temecula Valley area with over 100 licensed beds and a strong focus on physical, mental and spiritual well-being.

With the introduction of onsite paging, the healthcare industry has seen a great deal of benefit for patients and loved ones, offering them the freedom from being confined to waiting rooms, while maintaining instant and efficient communication at all times. “I like the simplicity of the paging system,” said IT Technical & Media Services Manager, Bill Lowe. “HME is very knowledgeable of their product and the healthcare industry, so it was the perfect fit for us.”

Today, LLUMC-M send out instant updates to patients and their families to keep them updated every step of the way throughout the patient’s registration, admission and post-operation process. These vital briefings are delivered with the use of HME Wireless pagers, and now hospital guests no longer risk missing out on essential information.
