HM Electronics, Inc. is not responsible for equipment malfunctions due to erroneous translation of its publications from their original English version. Illustrations in this publication are approximate representations of the actual equipment, and may not be exactly as the equipment appears.

© 2014 HM Electronics, Inc.
The HME logo and product names are registered trademarks of HM Electronics, Inc. All rights reserved.
FCC NOTICE
This device complies with Part 15 of the FCC rules. Operation is subject to the following two conditions:
(1) This device may not cause harmful interference, and (2) This device must accept any interference received, including interference that may cause undesired operation.

NOTE: This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communication. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense.

Changes or modifications not expressly approved by HM Electronics, Inc. could void the user's authority to operate this equipment.

Hereby, HM Electronics, Inc. declares that the DX300 is in compliance with the essential requirements and other relevant provisions of R&TTE Directive 1999/5/EC.

This product operates in the 2400 to 2483.5 MHz frequency range. The use of this frequency range is not yet harmonized between all countries. Some countries may restrict the use of a portion of this band or impose other restriction relating to power level or use. You should contact your Spectrum authority to determine possible restrictions.

WASTE ELECTRICAL AND ELECTRONIC EQUIPMENT (WEEE)

The European Union (EU) WEEE Directive (2002/96/EC) places an obligation on producers (manufacturers, distributors and/or retailers) to take-back electronic products at the end of their useful life. The WEEE Directive covers most HME products being sold into the EU as of August 13, 2005. Manufacturers, distributors and retailers are obliged to finance the costs of recovery from municipal collection points, reuse, and recycling of specified percentages per the WEEE requirements.

Instructions for Disposal of WEEE by Users in the European Union
The symbol shown below is on the product or on its packaging which indicates that this product was put on the market after August 13, 2005 and must not be disposed of with other waste. Instead, it is the user’s responsibility to dispose of the user’s waste equipment by handing it over to a designated collection point for the recycling of WEEE. The separate collection and recycling of waste equipment at the time of disposal will help to conserve natural resources and ensure that it is recycled in a manner that protects human health and the environment. For more information about where you can drop off your waste equipment for recycling, please contact your local authority, your household waste disposal service or the seller from whom you purchased the product.
SECTION 1. INTRODUCTION

The DX300 provides secure communication among the coaching staff. Spotters in the press box can communicate with offense “O” only, defense “X” only or “ALL” coaches via headsets connected directly to the base station. Coaches on the sideline wear beltpacs with headsets to communicate with each other and the spotters. Beltpacs can be set up for communication with any combination of offense, defense and ALL coaches.

This manual includes detailed setup and operating instructions for your DX300 system.

SECTION 3. EQUIPMENT SETUP

BATTERY CHARGER

NOTE: Set up the battery charger and charge all beltpac batteries while you are setting up the base station

1. Connect power supply to charger and electrical outlet

   ![Power supply and electrical outlet](image)

2. Charge all beltpac batteries
   Charging time is approximately 3 hours

   ![Storage ports for charged batteries](image)

   ![Status lights next to each charging port](image)

   **Status lights next to each charging port**

   **Red light**
   - Stays on steady while battery is charging

   **Green light**
   - Goes on when battery is fully charged

   **Yellow light**
   - Stays on steady when charging port is empty
   - Flashes if battery is too hot to charge
   - Next to battery in charging port means charge has failed – See instructions on side of charger
**BASE STATION**

1. Screw both antennas onto the connectors on the back of the base station. 
   
   **Tighten at 90° angle**

2. Plug power adapter into base station and screw nut onto connector, then plug power cord into power adapter and electrical outlet.

   ![Diagram of power adapter and cord](image)

   **NOTE:** A fully charged battery can be kept in the base station as a backup in case of AC power interruption.

3. Set up base station in press box, where no objects are blocking the line-of-sight from base station to your sideline.
   If interference is caused by objects in line-of-sight or sun screen on press box windows, refer to remote antenna installation on page 17.

4. Press POWER button to turn power on.

5. Plug headsets into base station, inserting headset plugs all the way into connectors.

   ![Diagram of headset connectors](image)
Optional Battery Operation of Base Station

The base station can operate on battery power when AC power is unavailable.

**NOTE:** Always plug base station into AC power when it is available. Turn base station off during halftime to conserve battery power.

Typical base station battery life when used continuously is as follows:

- Energizer ULTIMATE Lithium: 5 hours
- BAT850 Rechargeable Battery: 2½ hours
- Duracell Quantum: 35 minutes

1. If you are using the battery sled, load 6 “AA” batteries into it.

2. Pull back on the battery compartment latches and lift the battery compartment cover on the base station.

3. Insert the battery sled or rechargeable BAT850 battery (optional) into the battery compartment and close the cover.

4. If you are using the BAT850 battery, put it in the AC850 battery charger (optional) for recharging after each use. Follow the instructions received with the charger. Charging time is approximately 3 hours.

**NOTE:** When base station battery power is low, everyone connected to or registered to that base station will hear a tone in their headset, repeating every 8 seconds and both headset select lights will blink.
Spectrum Friendly™ Interference Avoidance

Multiple base stations can operate on high or low parts of the frequency band to prevent interference, which may be heard in a headset as popping sounds.

For example, if you have 4 base stations, set 2 on low band and 2 on high band, as follows.

**NOTE:** If you have more than one base station, the one you set up for interference avoidance will be considered the “primary” base station. All other “secondary” base stations will automatically set themselves to the same frequency band as the primary base station when they are initialized.

1. **Turn the base station power on.**
   
   The STATUS window will show “8” for a few seconds.
   
   After the “8” disappears, the STATUS window will be blank.

2. **Press and hold the CLEAR/BAND button and, while you are still holding the CLEAR/BAND button, press and hold the REGISTER button.**
   
   The STATUS window will show L, H or A.

3. **Press the CLEAR/BAND button repeatedly to cycle through parts of the frequency band — L = Low end, H = High end and A = All**
   
   Stop at the desired setting and wait until “c” appears on the STATUS display.

**NOTE:** Base stations are shipped in the “A” (default) position. “c” will only appear on the STATUS display if you are setting the frequency band the first time, or you are changing the setting. If you stop at L, H or A that was already set, an “8” will appear for a few seconds and the STATUS display will become blank. If you change a base station's existing frequency band setting, you will have to re-register all beltpacs and/or all-in-one headsets that were registered to that base station.
Primary/Secondary Base Station Setting

On the right side of the base stations, leave the BASE switch in the PRI position for the primary base station. Move the BASE switch to the SEC position on each secondary base station, and then press the base station POWER switch twice to turn the power off and back on again.

Multiple Base Stations

Up to 20 coaches can communicate using the DX300, 5 per base station, by interconnecting up to 4 base stations as described below. With multiple base stations, one will be considered the main or primary base station, and all others will be considered secondary base stations.

Initialize Multiple Base Stations

Multiple base stations must be “initialized” according to the following instructions, so their frequencies will not cause self-interference. After initializing each base station, register each beltpac and/or all-in-one headset that will be used with that base station.

1. With the primary base station powered on first, turn on the secondary base station.

   The STATUS window will show a double bar.

2. Press the REGISTER button on the primary base station.

   The STATUS window will show a small “o”.

3 Press the REGISTER button on the secondary base station to assign it a number (1, 2 or 3)
Wait until the base is initialized (approximately 10 seconds)

**CAUTION:** If more than two base stations will be used, each secondary base station must be assigned a different number (1, 2 or 3), or interference will occur

**RECOMMENDED:** If only two base stations will be used, set the secondary base station to #2

**HINT!** Mark each base station with its assigned number, and then, when registering beltpacks and/or all-in-one headsets, mark them with the number of the base station they are registered to, for later identification

4 When initialization is complete, the STATUS window will show one bar

5 Press the REGISTER button on the primary base station to clear the STATUS window
The display will also go blank after timing out

6 Repeat steps 1 – 5 to initialize up to three secondary base stations

**NOTE:** If the primary base is powered off for more than 30 seconds, all secondary bases will begin to operate independently. When that happens, the STATUS window on each base will show 3 bars.

If the primary base is turned back on, it will be necessary to press the RESET switch on each secondary base, to allow it to initialize to the primary base again.

**Audio Connection**

Connect base stations with the provided interconnect cable, from the BASE OUT connector on one to the BASE IN connector on the other
Single/Dual Channel Setting

In the single-channel (SNGL) mode — 4 beltpacs and/or all-in-one headsets can be used in the hands-free mode, communicating in “O” channel only

In the dual-channel (DUAL) mode — 3 beltpacs and/or all-in-one headsets can be used in the hands-free mode, communicating in either “O” or “X” channel, or “ALL” (both channels)

On the right side of the base station(s), set the MODE switch to the single or dual-channel position

---

Base Station Microphone Gain Adjustment

The microphone gain adjustment allows you to adjust the level of your voice as it is transmitted from the headsets plugged into the base station

Microphone gain must be adjusted for each base station headset.

1. Use a headset that is plugged into the right side of a base station, and locate the recessed MIC GAIN adjustment in a hole on the right side of the base station

2. Insert a small screwdriver in the hole and turn the adjustment clockwise to increase or counterclockwise to decrease microphone gain

3. Speak into the right headset microphone and listen to your own voice level (sidetone) in the headset as you adjust the microphone gain

4. Use a headset that is plugged into the left side of the base station, and locate the MIC GAIN adjustment on the left side of the base station, and then repeat steps 2 and 3 for the left side headset

5. Repeat steps 1 through 4 for each base station

**NOTE:** Base station microphone gain is factory set at about one-third from minimum level
**BELTPACS**

**Beltpac Registration**

**NOTE:** Registration of all-in-one headsets is the same as the beltpac registration described below, except for step 2
If you have more than one base station, you must register each beltpac to the base station it will be used with.

**1.** Turn the base station power on, and beltpac power off

**2.** Plug the headset into the beltpac and put the headset on your head

**3.** Press the REGISTER button on the base station registration panel

A lower case “o” will appear on the STATUS window

**4.** Press and hold the ALL button on the beltpac while you press and release its PWR (power) button

After a brief delay, you should hear “Registration complete” in the headset

An ID number for this beltpac will appear briefly on the STATUS window

**5.** Repeat steps 1 through 4 for each beltpac

**NOTE:** If the registration is not successful, you will hear “Registration failed” and the STATUS window will be blank. If this happens, refer to TROUBLESHOOTING in Section 5, page 22.

**NOTE:** If you try to register more than 15 beltpacs to a base station:
- An “F” (Full) will appear in the STATUS window and you will hear “Registration failed” in the headset
- Clear all current registrations by pressing and holding the CLEAR/BAND button while you press and release the RESET button with a pen point. Continue holding the CLEAR/BAND button after you release the RESET button until the clear code “c” (lower case) appears on the STATUS window
- Register all beltpacs, one at a time, including previously registered beltpacs.
Beltpac or All-In-One Headset Operating Mode Setup

Set up beltpacs and/or all-in-one headsets to operate in the desired mode by pressing and holding the button combinations shown below when you press the PWR (power) button to turn the unit on.

<table>
<thead>
<tr>
<th>Mode</th>
<th>Button Combination</th>
<th>Button Functions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Head Coach (default)</td>
<td>Hold X + O + ALL and press PWR</td>
<td>X, O &amp; ALL have normal functions</td>
</tr>
<tr>
<td><strong>NOTE:</strong> Beltpacs and all-in-one headsets are shipped in the Head Coach mode</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Offense only</td>
<td>Hold O and press PWR</td>
<td>X &amp; O work as O</td>
</tr>
<tr>
<td></td>
<td></td>
<td>ALL has no function</td>

<tr>
<td></td>
<td></td>
<td>ALL has no function</td>
</tr>
<tr>
<td>Latching (Hands-Free, Full-Duplex)</td>
<td>Hold ALL + ▲ and press PWR</td>
<td>X &amp; O will latch on when pressed and released, for a normal two-way conversation</td>
</tr>
<tr>
<td>Push-To-Talk (PTT)</td>
<td>Hold ALL + ▼ and press PWR</td>
<td>X, O &amp; ALL must be pressed and held while you talk, and released to listen</td>
</tr>
</tbody>
</table>

**NOTE:** Mode settings will be stored, so your beltpacs and/or all-in-one headsets will have the same mode settings after you turn them off and back on.

**NOTE:** ALL does not latch on, and must be held down to hear both O and X.
Beltpac or All-In-One Headset Adjustments

Sidetone Adjustment (Beltpac only, not on all-in-one headset)

When you speak into the microphone, you can hear sidetone (your own voice) in the beltpac headset.

Sidetone can be adjusted as follows:

1. Be sure the beltpac power is on.
2. While holding down the “O” button, press the volume-up ▲ or volume-down ▼ button as many times as needed to reach an acceptable level. If you reach the high limit, you will hear “maximum” in the headset. If you reach the low limit, you will hear double beeps. Maximum sidetone level is recommended.

Microphone Gain Adjustment

Some users speak louder or softer than average.

The microphone gain adjustment helps to compensate for extremes in speaking level of coaches using beltpacs or all-in-one headsets.

**NOTE:** The microphone gain can be monitored through sidetone, or preferably by someone else using a beltpac or all-in-one headset, or at the base station.

1. Be sure the beltpac or all-in-one headset power is on.
2. While holding down the “X” button, press the volume-up ▲ or volume-down ▼ button as many times as needed to reach an acceptable level. If you reach the high limit, you will hear “maximum” in the headset. If you reach the low limit, you will hear double beeps.

Recommended microphone gain levels are:

- Beltpacs – 12 presses down from maximum
- All-in-one headsets – 8 presses down from maximum

**NOTE:** Microphone gain and sidetone adjustments will be saved in memory and does not need to be reset after the unit is turned off and on.
**OPTIONAL REMOTE ANTENNA INSTALLATION**

It may be necessary to locate the antennas away from the base station if it is not possible to avoid obstructions between it and the sideline, or if the press box has windows that are coated with a metalized sun reflecting film. Either of these situations may block signals from the press box base station to the beltpacs on the field.

Remote antenna kits with either 6 foot (1.83 meter) or 30 foot (9.14 meter) cables can be used to mount the antennas wherever necessary to alleviate this problem.

To order a remote antenna kit, refer to the optional equipment shown on page 3. Installation instructions are enclosed with the remote antenna kit.
OPTIONAL AUXILIARY EQUIPMENT CONNECTION

Auxiliary equipment such as audio/video recorder or a hardwired intercom can be connected to the rear panel of the base station

1. Connect the wires from your auxiliary audio equipment to the enclosed 10-pin connector according to the following table.

<table>
<thead>
<tr>
<th>Pin</th>
<th>Connections</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Aux In – O</td>
<td></td>
</tr>
<tr>
<td>2</td>
<td>Aux In + O</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>Aux Out – O</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>Aux Out + O</td>
<td></td>
</tr>
<tr>
<td>5</td>
<td>Ground</td>
<td></td>
</tr>
<tr>
<td>6</td>
<td>No Connection</td>
<td></td>
</tr>
<tr>
<td>7</td>
<td>Aux In – X</td>
<td></td>
</tr>
<tr>
<td>8</td>
<td>Aux In + X</td>
<td></td>
</tr>
<tr>
<td>9</td>
<td>Aux Out – X</td>
<td></td>
</tr>
<tr>
<td>10</td>
<td>Aux Out + X</td>
<td></td>
</tr>
</tbody>
</table>

2. Plug the connector into the back panel of the base station as shown above.

3. Using a small screwdriver in the holes on the front panel of the base station, you can adjust the IN and OUT sound level of “O” and “X” communication channels as needed.
SECTION 4. EQUIPMENT OPERATION

THE BASICS

IN THE PRESS BOX – Base Station Operation

1. Press base station POWER button to turn on power

2. Put left or right headset on your head
   Use headset controls on same side of base station as headset

3. Adjust headset volume as needed

   **CAUTION:** Having your headset at a high volume level for a long time can cause hearing damage

4. Press channel SELECT button; Green light appears above O, ALL or X selection — Press SELECT button again to change selection

5. To talk to coaches, press and release TALK button – Green light turns red
   Talk and listen to coaches as in normal telephone conversation
   Press and release TALK button again when you finish talking
   (You will still hear the other coaches but they will not hear you)

6. To turn base station off, press and hold POWER button until the lights go off
ON THE FIELD –

Beltpac / All-In-One Headset Operation

1. Be sure fully charged battery is in the unit
2. If using beltpac —
   Plug headset into beltpac and put headset on your head
   Slide beltpac into pouch and clip it on your belt
3. Press and release PWR (power) button to turn unit on
   - Beltpac power button
   - All-in-one headset power button (above earpiece on inside surface)
4. Press and release O button to communicate with offense coaches or X button to communicate with defense coaches
   - Speak to offensive coaches
   - Speak to defensive coaches
5. To communicate with both offense and defense coaches, press and hold ALL button while talking
   - Speak to all coaches
6. Adjust headset volume as needed
   - Increase volume
   - Decrease volume
7. To turn unit off, press and hold power button for about 2 seconds until you hear “Power off”

CAUTION: Having your headset at a high volume level for a long time can cause hearing damage
Changing Batteries

Beltpac batteries typically provide 20 hours of continuous use in listen mode

If you hear “Change battery” in your headset —

1. If using beltpac, remove it from its pouch
2. Slide battery release latch in direction of arrow
3. Lift battery out of beltpac or headset
4. Place battery in battery charger port for recharging
5. Install fully charged battery in beltpac or headset
6. If using beltpac, put it back in its pouch
If you are unable to correct any of the problems described below or if your problem is not covered, call 1-800-909-6604 for assistance.

- **Power light on base station does not come on when power button is pressed**
  Be sure the power supply is properly connected to the base station, and the power cord is properly connected to the power supply and electrical outlet.
  If operating on battery power, be sure the battery is charged and in the battery compartment with the cover is securely closed.

- **Beltpac/Headset power lights do not turn green and you hear “out of range”**
  Be sure the base station power is on.
  Turn beltpac/headset power on and off.
  Beltpac/Headset may be too far from the base station.

- **When trying to register a beltpac/headset, you hear “registration failed”**
  Press the **RESET** button on the base station with the point of a pen.
  The **STATUS** window will show “8” and then become blank.
  Try again to register the beltpac/headset.
  If registration fails again, call your dealer for assistance.

- **Other coaches can not hear me when I talk**
  Be sure you are pressing the **X** or **O** button on the beltpac/headset, or the **TALK** button on the base station.
  Be sure you are pressing the button for the correct channel.
  Be sure the headset plug is properly connected to the beltpac or base station.

- **With more than one base station, offensive spotter can not hear O or ALL transmission from another base, or defensive spotter can not hear X or ALL transmission from another base**
  Be sure interface cable is properly connected from BASE OUT on the primary base station to BASE IN on the secondary base station, and so on.
  If problem is not resolved, try using a different interface cable.

- **No or low auxiliary audio sound**
  Check wiring from auxiliary equipment to AUX AUDIO connector on back of the base station.
  Turn AUX AUDIO adjustments on front of base station with a small standard (flat) screwdriver, clockwise to increase level and counterclockwise to decrease level.
- Coaches using beltpacs or all-in-one headsets can not hear or talk to coaches using base station headsets
  Be sure base station headsets are fully plugged into the base station headset connectors
  Be sure the appropriate SELECT lights are red (O, X or ALL) when coaches at base station are talking
  Be sure coaches are talking or listening on the right channel (O, X or ALL)

- Beltpac range is bad
  Be sure antennas are properly connected and tightened on base station
  Be sure base station is positioned where there are no physical obstructions blocking line-of-sight from the base station to your sideline

- Beeping is heard in base station headset and SELECT lights are blinking
  Base station is operating on battery power and battery is low

- Not all beltpac buttons are working
  Button functions may have been changed to work in the desired operating mode
  (See page 15)

- There is interference from a cordless telephone
  If there is a 2400MHz cordless telephone nearby, interference may occur
  If it does occur, changing frequencies on the telephone should eliminate the problem
  If it does not, move the phone as far as possible from the base station, or use another type phone

(If your base station does not have a battery backup)
In the event of an electrical power outage — such as from lightning or a power generator failure, if you experience problems with your DX300 equipment after the power comes on again, unplug the AC power supply from its electrical outlet and wait 15 seconds, then plug it back in
FREQUENTLY ASKED QUESTIONS

- Are the battery charger and base station power supplies interchangeable?
  Yes

- What is the maximum recommended number of base stations that can be linked together with interconnect cables?
  Four

- Does linking the base stations automatically prevent them from interfering with each other?
  No, all base that are linked together must be initialized to prevent them from interfering with each other’s frequencies

- If the primary base station is turned off just momentarily (before the secondary base(s) have a chance to start working independently), will the secondary base(s) automatically re-initialize to the primary?
  Yes, the secondary base(s) will re-establish communication without being initialized again

- Will a secondary base station continue to operate if its primary is turned off for a period of time?
  Yes & No. Secondary base stations will initially stop operating when the primary base is turned off, but will resume operation independently after about 40 seconds. Three bars will appear in its STATUS display, and its beltpacs will still be able to communicate. If the primary base station is turned back on, the secondary base must be turned off and on again to re-establish proper initialization

- Can I use more than three beltpacs on a single base station in dual channel mode?
  Yes, but only three users will be able to transmit at the same time. Up to 15 beltpacs can be registered to a single base station. Beltpacs and all-in-one headsets should be placed in press-to-talk mode when more than 3 beltpacs or all-in-one headsets are used (See page 11)

- What should I do if my carrying case and equipment get wet?
  Dry them out thoroughly before further use
  Be sure all equipment is dry before using it again

  **CAUTION: Plugging wet electrical equipment into an AC power outlet is dangerous!**
## EQUIPMENT SPECIFICATIONS

### Base Station

#### GENERAL

<table>
<thead>
<tr>

<tbody>
<tr>
<td>Frequency Range:</td>
<td>All, 2400 – 2483.5 MHz</td>
</tr>
<tr>
<td></td>
<td>Low, 2401.92 to 2439.94 MHz</td>
</tr>
<tr>
<td></td>
<td>High, 2443.39 to 2481.41 MHz</td>
</tr>
<tr>
<td>Frequency Response:</td>
<td>200 Hz to 3.5 kHz</td>
</tr>
<tr>
<td>Power Requirements:</td>
<td>100-240VAC, 50-60Hz</td>
</tr>
<tr>
<td></td>
<td>12-14VDC or six AA batteries (NiMH optional)</td>
</tr>
<tr>
<td>Temperature Range:</td>
<td>32-122°F (0-50°C)</td>
</tr>
<tr>
<td>Size</td>
<td>8” x 8” x 3.5” (20.32 x 20.32 x 8.89 cm)</td>
</tr>
<tr>
<td>Weight</td>
<td>2.75 lb with battery (1.25 kg)</td>
</tr>
<tr>
<td># of Beltpac's per Base:</td>
<td>15 can be registered; any 4 can have simultaneous full-duplex communication at one time (in single channel mode)</td>
</tr>
<tr>
<td>8-Wire I/O:</td>
<td>RJ45, 600Ω balanced out, high impedance in</td>
</tr>
<tr>
<td>Auxiliary Audio:</td>
<td>10-Ckt Phoenix connector, 600Ω balanced out, high impedance in, level adjustable</td>
</tr>
<tr>
<td>Headset Connectors:</td>
<td>4-pin mini-DIN</td>
</tr>
<tr>
<td>Electret microphone:</td>
<td>45 KΩ</td>
</tr>
<tr>
<td>Headset Output:</td>
<td>200mW into 32Ω</td>
</tr>
<tr>

25
TRANSMITTER —
Type: Frequency hopping, spread spectrum
Transmit Power: 100mW burst
Modulation Type: Gaussian filtered FSK, TDMA
Frequency Stability: 13 ppm
Harmonics/Spurious: Exceeds FCC and ETSI specifications over temperature

RECEIVER —
Type: Frequency hopping, spread spectrum
RF Sensitivity: <-90dBm w 10⁻³ BER
Frequency Stability: 13 ppm
Distortion: <2%

Beltpac
* Frequency Range: 2400 MHz – 2483.5 MHz
Antenna: Internal, horizontal/vertical diversity
Frequency Response: 200 Hz to 3.5 kHz
Transmit Power: 100mW burst
RF Sensitivity: <-90dBm w 10⁻³ BER
Battery Requirements: 3.6V lithium ion, rechargeable
Battery Life: Hands-free – up to 14 hours
PTT – up to 20 hours
Temperature Range: 32-122°F (0-50°C)
Weight: 7.4 oz (.21 kg) with battery and pouch
Headset Connector: 4-pin, mini-DIN
Microphone: Electret
Headset Output: 160mW into 32Ω
Controls: Power PWR, Volume-up ▲, Volume-down ▼, O, X, ALL
Indicators: Dual-color LED (red/green)

All-In-One Headset
* Frequency Range: 2400 MHz – 2483.5 MHz
Antenna: Internal
Frequency Response: 200 Hz to 3.5 kHz
Transmit Power: 100mW burst
RF Sensitivity: <-90dBm w 10⁻³ BER
Battery Requirements: 3.6V lithium ion, rechargeable
Battery Life: Hands-free – up to 14 hours
PTT – up to 20 hours
Temperature Range: 32-122°F (0-50°C)
Weight: 5.7 oz (.16 kg) with battery
Microphone: Electret
Headset Output: 160mW into 32Ω
Controls: Power, Volume-up ▲, Volume-down ▼, O, X, ALL
Indicators: Transmit LED (red in defense / green in offense)
Power LED (red/green)

* NOTE: Communicators will follow the frequency range determined by the setting on the Base Station (e.g. All, Low or High).
