There are some new and exciting enhancements to the HME CLOUD!

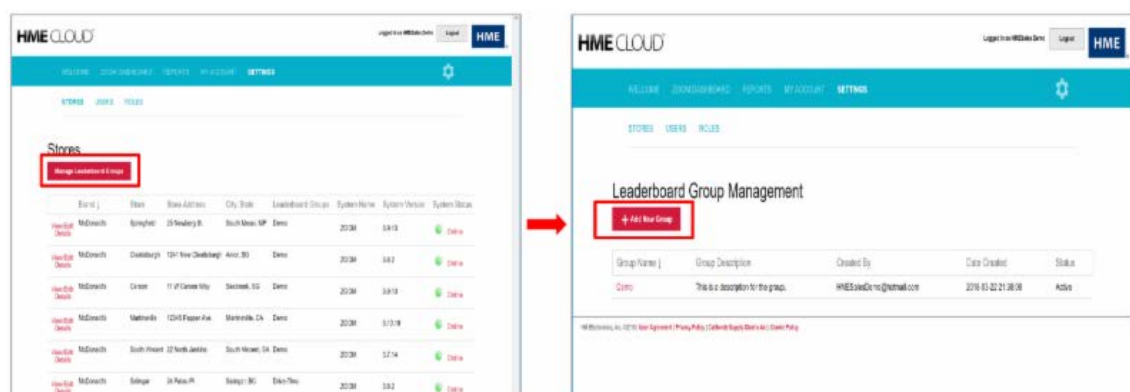

Group stores into separate Leaderboards under single account

The HME CLOUD enables a QSR Owner/Operator to breakdown their large number of stores into groups displayed on separate Leaderboards. Account owners can create multiple Leaderboards within their single account.

For example, Joe Smith is a QSR Ops Manager who manages 30 stores. Joe would like to group his 30 stores into 5 different groups. Each group will appear as a separate Leaderboard. Joe now has 5 different Leaderboards under his account.

To group stores into separate Leaderboards:

1. On the Store List/ Settings page, click **Manage Leaderboard Groups** to open the "**Leaderboard Group Management**" page.

2. Click **+ Add New Group** to open the "**Leaderboard Group Details**" page.

3. Edit the "**Leaderboard Group Details**" page to create new groups. Newly created groups are displayed on the Leaderboard.

Show both store name & number on the CLOUD dashboard and Download

HME CLOUD adds the ability to show both store name and number on the CLOUD dashboard and report download. It gives the flexibility for corporate users and store owners to easily view or search their stores.

On the HME CLOUD welcome page, click the gear icon and select "**Display Settings.**" On the "**Display Settings**" page, users can toggle between **Include** or **Exclude** under **Store Name Column**. The store number will be displayed by default, but if the user activates the **Store Name Column** option, a column for Store Name will be added to both the HME CLOUD dashboard and report download.

The following is an example to show both store name and store number on the HME

CLOUD dashboard:

Support tandem lane configuration in HME CLOUD reports

HME CLOUD can generate reports for a single store with tandem lane configuration. Tandem lane is treated as a single lane configuration, but with two menu boards next to each other.
